LET'S MEET SARAH & TINA

Sarah is a Grade 7 student at Batangas City. She currently lives with her 70-year-old, Lola Tina. Lola Tina is scared to get vaccinated because of rumors circulating around regarding the effect of the vaccine. Sarah is worried for the health of her Lola.

OUR OBJECTIVES

3 GOOD HEALTH AND WELL-BEING

- to examine the current COVID-19 data in the Philippines as well as the vaccination status in our country.
- to encourage some Filipinos who are still afraid of getting vaccinated to get vaccinated, as well as to provide an analysis of how getting vaccinated will help to reduce overall cases in the country.

PROBLEM STATEMENT

In addition to the health impact that COVID-19 has brought to many people's lives, the newly formulated vaccines were mostly rejected by a lot of people because of their significant concerns and uncertainty among the branded vaccines. They have safety concerns and other personal beliefs that made them hesitant in accepting the COVID-19 vaccines. Also, according to recent surveys, the country's vaccination efforts slowed down since COVID-19 alert level statuses were downgraded.

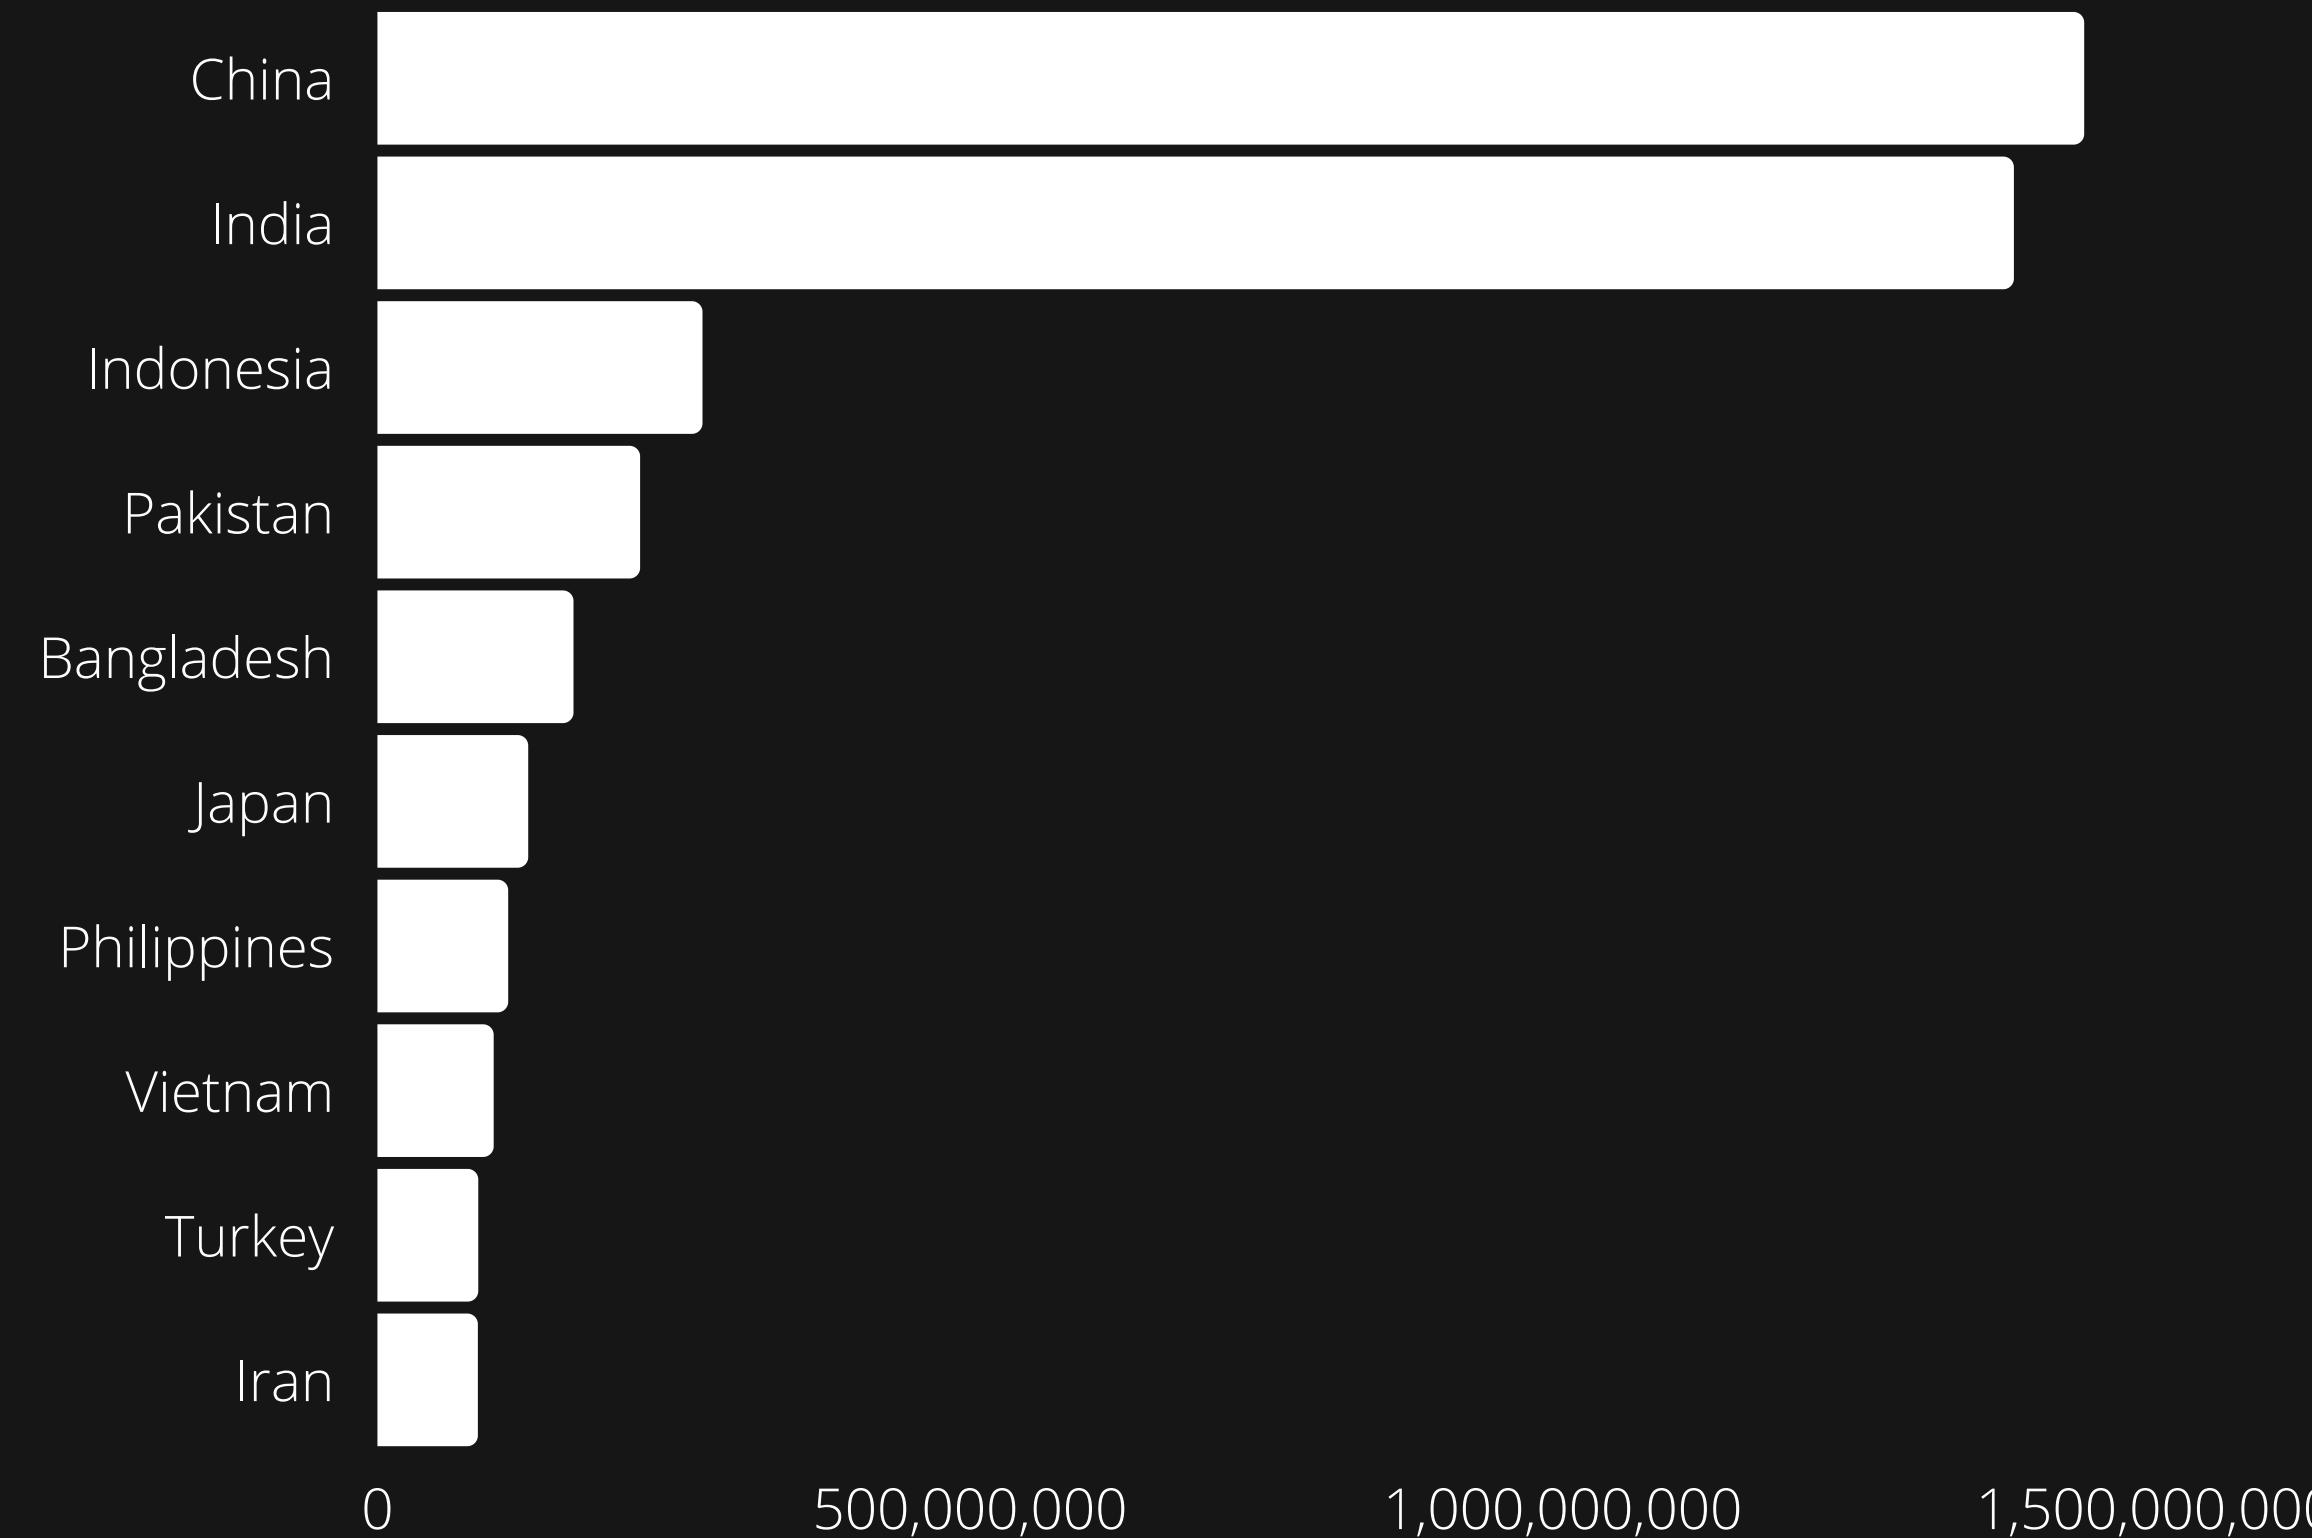

When can we achieve the 80% goal and what can we help?

112,239,152

is the current population of the Philippines based on Worldometer elaboration of the latest United Nations data.

COVID 19

According to reports, the very first confirmed case of Covid in the world had been discovered on November 17, 2019.

According to the South China Morning Post, a 55-year-old man from China's Hubei Province may be the first to contract the life threatening virus.

However, it took a month for reports of confirmed cases in Wuhan to emerge.

PH

CASES

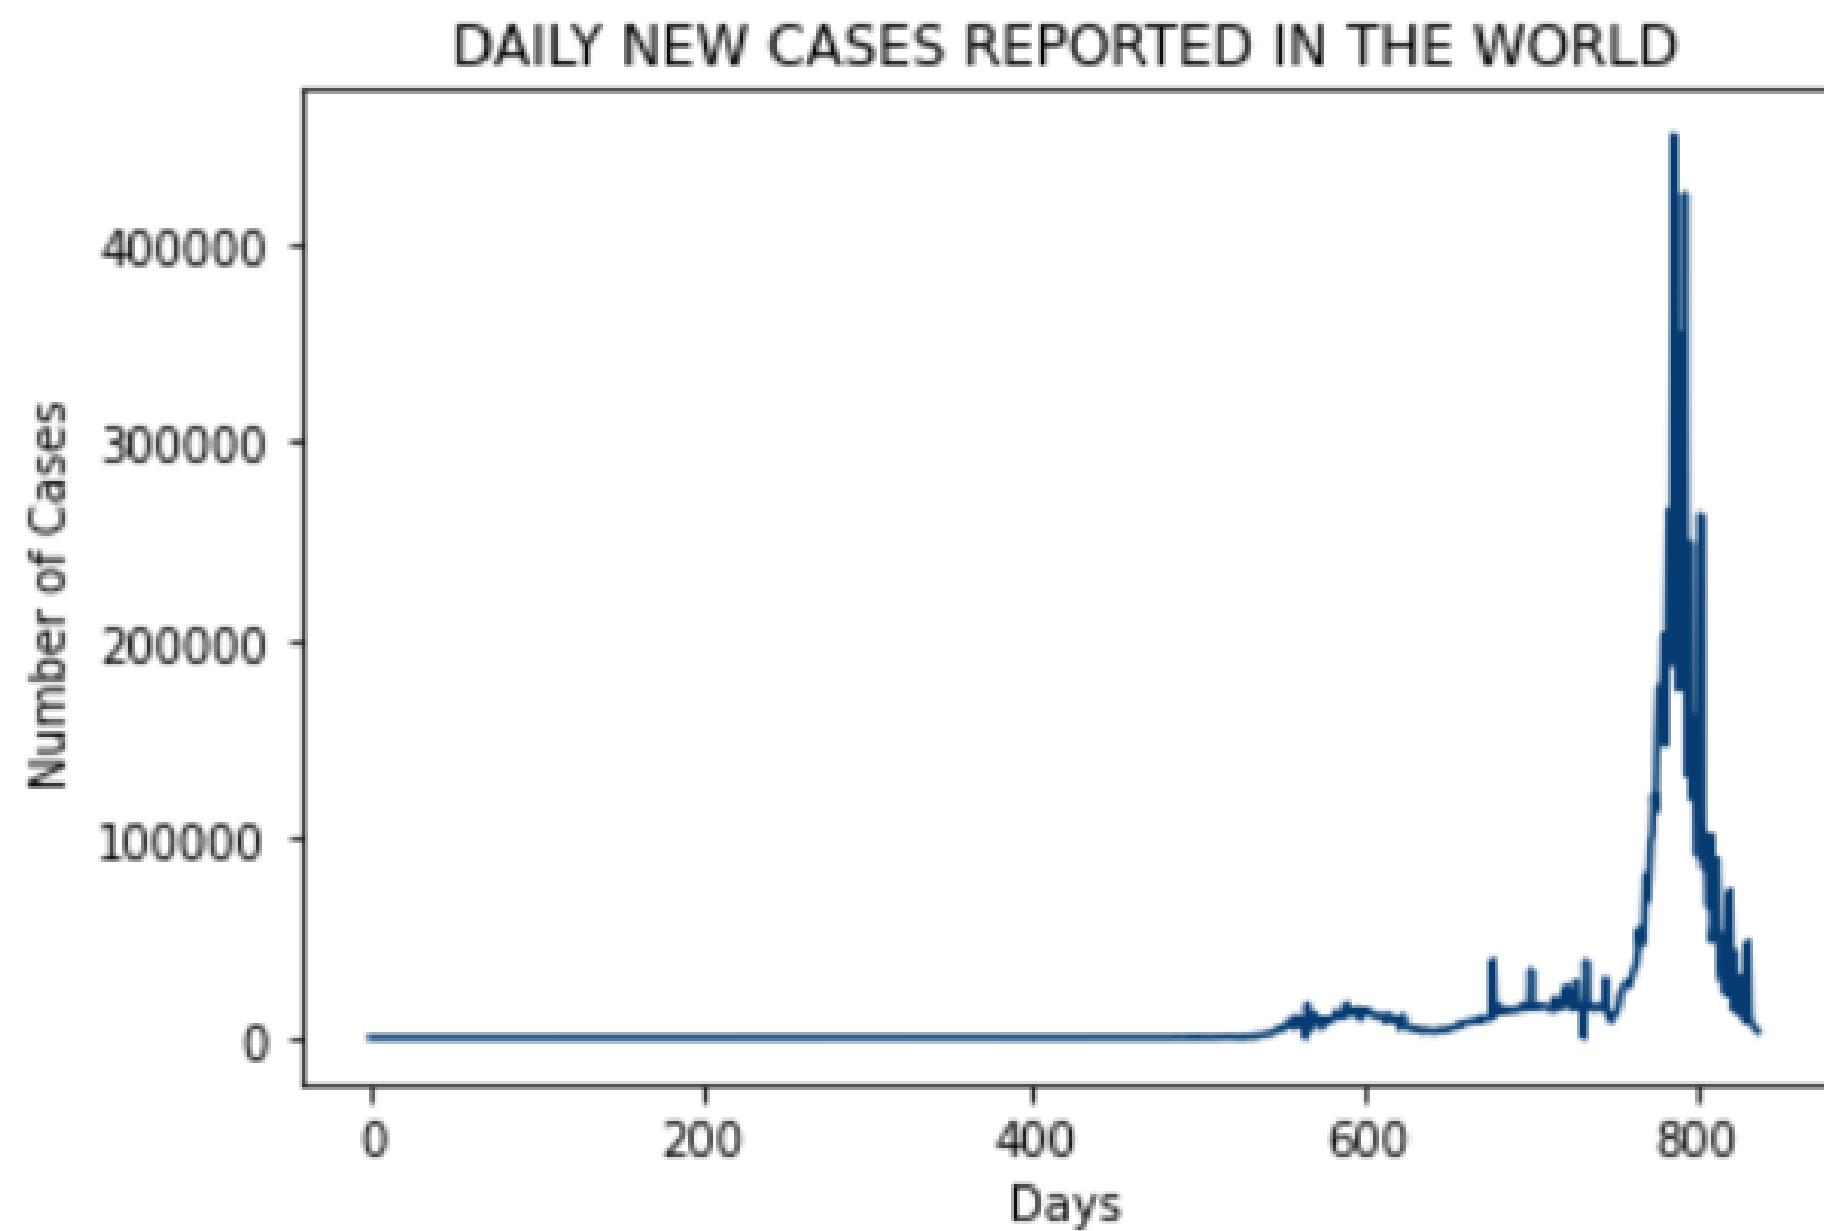

The first recorded case of COVID-19 in our country was of a woman experiencing the symptoms who became confined at San Lazaro Hospital.

Since then, the number of daily cases of COVID-19 has increased, with confirmed cases totaling nearly 4,000,000 and causing 59,030 deaths as of March 29, 2022.

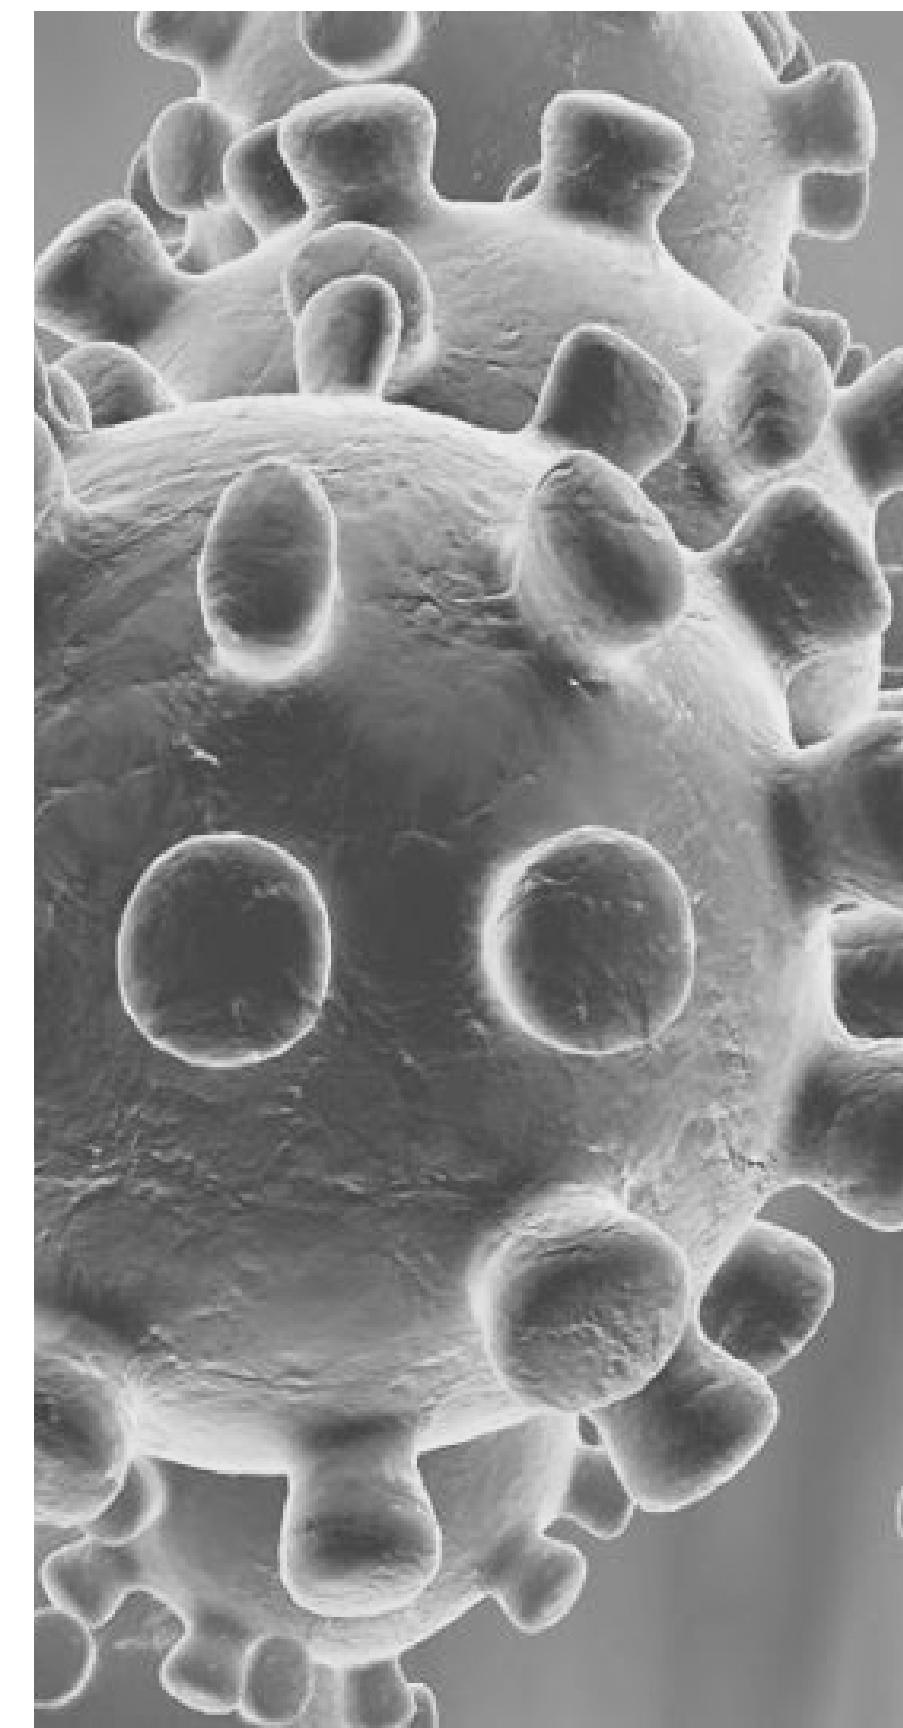

So far, the highest peak of daily cases here in our country is 39,004 cases last January 15, 2022.

VACCINATIONS

■ The WHO Emergency Use Listing process determines whether a product can be recommended for use based on all the available data on safety and efficacy and on its suitability in low- and middle-income countries.

■ Vaccines are assessed to ensure they meet acceptable standards of quality, safety and efficacy using clinical trial data, manufacturing and quality control processes.

SOLUTIONS

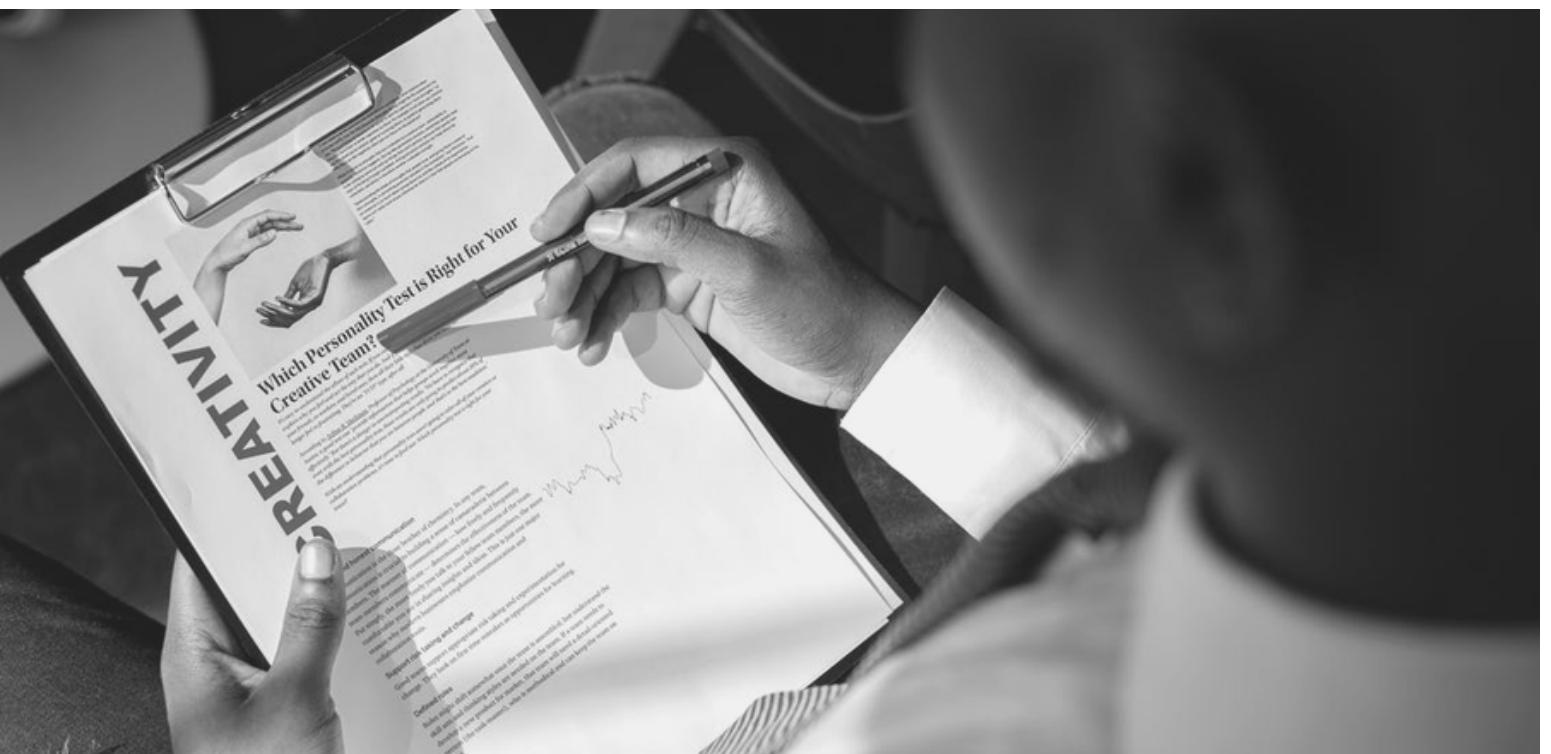

According to the recent releases by the Department of Health, we are still quite far from reaching the goal of 80% total percentage of vaccinations in our country.

What can we do to boost vaccinations?

MORE SOLUTIONS

Reaching New Heights:
Boosting Vaccinations for a
Safer Community

1. SURVEY

- Start small! Surveying can start first per barangay in order to know how many and who are the individuals currently unvaccinated.
- It is important to do a survey in order to provide numbers and make reasonable decisions.
- This step is crucial for all the proposed solutions.

Reaching New Heights:

Safer Community

2. MOTIVATIONAL INTERVIEW

With all the rumors/misinformation that circulates the internet and the 'marites' world, conducting a motivational interview with the people scared of vaccinations is essential.

3. H2H VACCINATION

ALREADY BEEN IMPLEMENTED IN
THE PHILIPPINES, BUT IT NEEDS A
LITTLE MORE PUSH!

Especially recommended to those who are far from
the city and doesn't have resources to get vaccinated

Reaching New Heights:
Boosting Vaccinations for a
Safer Community

4. COMBATING MISINFORMATION

■ PROBABLY THE MOST ESSENTIAL SOLUTION TO HELP BOOST VACCINATIONS!

■ A lot of people, especially those like Lola Tina, are scared to get vaccinated due to rumors circulating around. There may be some cases where people just getting vaccinated experience some side effects. However, with word-of-mouth, the side effects may come worse than the original story.

LET'S GET VACCINATED!

Even as students, we can help encourage people like Lola Tina to get vaccinated. With simple acts like sharing essential information regarding the effectiveness of vaccinations and their effect to the country, step by step we can help reach the 80% mark!
